

TillageMax DAYTONA[®]

Tillage Radish[®] + CCS Crimson Clover Mix

The high performance TillageMax Daytona[®] mix delivers benefits of Tillage Radish[®], the only proven yield-boosting cover crop radish, and absorbs soil nitrogen and other key nutrients with its unique taproot creating thick channels 30" and deeper. CCS Crimson Clover converts atmospheric nitrogen into plant available nitrogen, helping reduce fertilizer input while improving soil health by adding organic matter.

EXCELLENT FOR:

- Nitrogen production in spring
- Restoring soil health
- Relieving compaction

PLANTING TIPS AND SEEDING RATES:

PLANTING: Plant 3 - 10 weeks prior to first killing frost.

PLANTING DEPTH: ¼" - 1"

SEEDING RATE:

DRILLING: 10 lbs/acre

BROADCAST / AERIAL: 13 lbs/acre

**PRECISION PLANTING (15" WITH
1½" IN-ROW):** 8 lbs/acre

BEST TO PLANT: Before corn and other grass crops.

FORAGE:

Increase seeding rate to 13 lbs/acre.
